48 V, 22 MHz, Low Noise, RRO Operational Amplifiers

General Description

The LTA8291, LTA8292 and LTA8294 (LTA829x) are a family of low power, 48 V wide supply voltage, low noise, rail-to-rail output operational amplifiers capable of operating on supplies ranging from +4.5 V (±2.25 V) to +48 V (±24 V). This new generation of high-voltage CMOS operational amplifiers, in conjunction with the LTA828x, LTA827x and LTA826x, provide a family of bandwidth, noise, and power options to meet the needs of a wide variety of applications. The LTA829x devices offer outstanding dc precision and ac performance, including low offset (±1.8 mV maximum), low offset drift (±2 µV/°C typically), 22 MHz bandwidth, and 4 nV/√Hz input voltage noise density at 10 kHz. Unique features such as differential input-voltage range to the negative supply rail, high output current (±45 mA), high capacitive load drive of up to 1 nF, and high slew rate (20 V/µs) make the LTA829x high-performance operational amplifiers for high-voltage industrial applications.

The robust design of the LTA829x family provides ease-of-use to the circuit designer: integrated RF/EMI rejection filter, no phase reversal in overdrive conditions, and high electro-static discharge (ESD) protection. The LTA829x are optimized for operation at voltages from +4.5 V (±2.25 V) to +48 V (±24 V) over the extended temperature range of −40 °C to +125 °C.
